6. How many years of experience does Dr. Shashanka Chunduri have?

Dr. Shashanka Chunduri possesses 12 years of experience in cardiology.

7. What does a Cardiologist do?

Cardiologists diagnose and treat heart conditions. Their work involves identifying issues such as abnormal heart rhythms, blocked blood vessels, and heart murmurs. Treatment may include managing heart failure, post-heart attack care, and advising on procedures like angioplasty, stents, and cardiac surgery.

8. When should I consult a cardiologist?

Consult a cardiologist if you experience chest pain, dizziness, palpitations, or shortness of breath; have high blood pressure, chronic kidney disease, peripheral artery disease, or diabetes; have a history of smoking; have a family history of high cholesterol or heart disease; or maintain a sedentary lifestyle. These are all significant risk factors for cardiovascular disease requiring professional medical attention.

9. What to expect at my first visit to a heart specialist?

Your initial consultation with a cardiologist will involve a thorough review of your medical history and risk assessment for coronary artery disease. Expect a physical examination focusing on your cardiovascular system, including measurements of heart rate and blood pressure. An electrocardiogram (ECG) may also be performed.

10. How do cardiologists diagnose blocked arteries?

Cardiologists employ various diagnostic tests to identify arterial blockages. These may include: angiogram, echocardiogram (often with a cardiac stress test), electrocardiogram (ECG), chest X-ray, ultrasound, computed tomography (CT) scan, magnetic resonance imaging (MRI) scan, positron emission tomography (PET) scan, and blood tests such as lipid profiles to assess cholesterol levels.
