4. What is Dr. Brajaraj Das's specialization?

Dr Brajaraj Das specializes in Cardiology. He has expertise in treating conditions such as Coronary Artery Disease (CAD), Arrhythmia, Heart Failure. His key treatments include Angioplasty & Stenting, Pacemaker Implantation, Heart Valve Surgery.

5. What are Dr. Brajaraj Das's medical qualifications?

Dr Brajaraj Das holds MBBS, MD(General Medicine);DM (Cardiology), reflecting his comprehensive education in the field of Cardiology.

6. How many years of experience does Dr. Brajaraj Das have?

Dr. Brajaraj Das has 17 years of experience in cardiology. His extensive experience spans various medical settings.

7. What does a Cardiologist do?

Cardiologists diagnose and treat heart conditions. Their work includes identifying issues like abnormal heart rhythms, blocked blood vessels, and heart murmurs. Treatment may involve managing heart failure or post-heart attack care, and advising on procedures such as stents, heart surgery, catheterization, and angioplasty.

8. When should I consult a cardiologist?

Consult a cardiologist if you experience chest pain, dizziness, palpitations, or shortness of breath; have high blood pressure, chronic kidney disease, peripheral artery disease, or diabetes; have a history of smoking; have a family history of high cholesterol or heart disease; or maintain a sedentary lifestyle. These are all potential indicators of cardiovascular issues requiring expert medical attention.

9. What to expect at my first visit to a heart specialist?

Your initial consultation with a cardiologist will involve a thorough review of your medical history and risk assessment for coronary artery disease. Expect a physical exam focusing on your cardiovascular system, including blood pressure and heart rate checks. An electrocardiogram (ECG) may also be performed.

10. How do cardiologists diagnose blocked arteries?

Cardiologists employ various diagnostic tests to identify arterial blockages. These may include non-invasive imaging techniques such as echocardiogram, electrocardiogram, chest X-ray, ultrasound, CT scan, and MRI scan. Invasive procedures like angiogram may also be used. Blood tests, such as lipid profiles for cholesterol screening, and PET scans can provide further insights into cardiac health and the presence of blockages.
