6. Who is a General Physician?

A general physician (GP) is a medical doctor specializing in non-surgical adult healthcare. They treat various diseases not requiring surgery, encompassing cardiovascular, respiratory, neurological, hematological, endocrine, and gastrointestinal systems. Some GPs may further specialize within these systems.

7. What are the education requirements to become a General Physician?

General physicians, also known as primary care physicians, require extensive medical training. This includes a bachelor's degree in science with a minimum GPA, successful completion of medical school, and a three-year residency in primary care. These prerequisites ensure comprehensive medical knowledge and skills for primary care practice.

8. When should I consult a General Physician?

Consult a general physician for a wide range of non-surgical health concerns. These include cardiovascular, respiratory, musculoskeletal, neurological, gastrointestinal, and endocrine system issues. A general physician is typically the first point of contact for most health problems.

9. Do General Physicians offer home consultations?

General physicians (GPs) offer comprehensive healthcare services, including physical examinations, immunizations, and treatment for various medical conditions. GPs often manage long-term patient care across diverse age groups. Home consultation availability varies depending on individual physician practice and patient needs. Routine check-ups may be offered at home.

10. Can a General Physician perform surgery?

No. General physicians provide non-surgical primary care, managing illnesses and injuries with medication, physical therapy, and other non-invasive methods. Surgical procedures are performed by general surgeons, a distinct medical specialty. General physicians focus on building long-term patient relationships through comprehensive primary care.
